Canadian Data Report of Fisheries and Aquatic Sciences No. 546

86-1145/

Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Healey, M. C., B. Riddell, F. P. Jordan, and J. Morris. 1985. The 1981-1983 West Coast Troll Log Book Project: 1. Outline of the Project and Data on Catch of Chinook (Oncorhynchus tshawytscha) and Coho (O. kisutch) Salmon. Can. Data Rep. Fish. Aquat. Sci. 546: 145 p.

During 1981 to 1983 fishing seasons, between 20 and 35 trollers recorded information on daily catch composition and biological parameters of catch in all outside fishing areas of British Columbia for the Fisheries Research Branch. This log book program was characterized by high enthusiasm among the fishermen participants, and produced data of high quality. In this report we describe the design of the program, suggest some reasons for its success and present the catch data for chinook and coho salmon that resulted from the program. Catch data for other species, and biological data, will be reported in subsequent publications.

RESUME

Healey, M. C., B. Riddell, F. P. Jordan, and J. Morris. 1985. The 1981-1983 West Coast Troll Log Book Project: 1. Outline of the Project and Data on Catch of Chinook (Oncorhynchus tshawytscha) and Coho (O. kisutch) Salmon. Can. Data Rep. Fish. Aquat. Sci. 546: 145 p.

Au cours des saisons de pêche 1981 à 1983, de 20 à 35 bateaux de pêche à la traîne ont enregistré des renseignements sur la composition des prises quotidiennes et sur les paramètres biologiques des prises effectuées dans tous les secteurs de pêche extérieurs de la Colombie-Britannique, pour le compte de la Direction générale de la recherche sur les pêches. Le programme des livres de bord a été accueilli avec un grand enthousiasme par les pêcheurs participants et il a permis d'obtenir des données de haute qualité. Dans ce rapport, nous décrivons la conception du programme, suggérons quelques raisons pour son succès et présentons des données recueillies sur les prises de saumons quinnats et cohos. Les données sur les prises d'autres espèces et les données biologiques connues seront présentées dans des publications ultérieures.

INTRODUCTION

In 1981 we initiated an investigation of catch success and catch composition in the British Columbia troll fishery. The investigation had two broad objectives: 1) To describe seasonal and regional variation in catch rate and catch composition of trollers; and 2) To relate fleet distribution to capture success and oceanographic conditions. The purpose of this report is to describe the log book program and to present the data gathered on catch of chinook (Oncorhynchus tshawytscha) and coho (O. kisutch) salmon by vessels participating in the project during 1981 to 1983. We shall present data on catch of other salmon species and biological measurements on the fish in subsequent reports.

DESCRIPTION OF THE LOG BOOK PROGRAM AND DATA GATHERED:

By means of log books that we supplied, trollers collected daily information on catch, weather and ocean conditions. We broke the day into three time periods (<1000 hrs, 1000 - 1600 hrs, >1600 hrs). We asked fishermen to record, during each time period, the number of hours spent fishing, the number of each salmon species landed, the number of each salmon species caught and released, the number of each non-salmon species captured, and the location fished (loran coordinates and/or geographic location). We also asked the fishermen to measure the fork lengths of chinook and coho up to a maximum of 25 for each species, to record information on stomach contents, to collect scales from the chinook salmon for age analysis, to record the sex of the fish, and to search for fish with missing adipose fins. Fish with the adipose fin missing were to be marked with a strap tag for later recovery and examination for an internal coded wire tag (Jefferts et al. 1963). We also requested that the fishermen note which species, if any, they were attempting to capture so that other species captured could be considered incidental catch.

The manner of recording stomach contents differed in 1981 from that in 1982 and 1983. In 1981 we gave the fishermen a list of the most important known diet items of chinook and coho and asked them to indicate the approximate percentage of stomach contents each item comprised. In 1982 and 1983 we asked them first to note whether the stomach of each fish was empty, <1/2 full, or >1/2 full and then to note the principal food in each stomach.

In 1981 we requested that the fishermen record, during each daily time period, per cent cloud cover, wind speed and direction, depth of water in which they were fishing, and water temperature when they had a temperature recording device in the hull. In 1981 we also placed observers aboard some vessels whose job it was to record the log book entries and to collect additional oceanographic information including water samples for chlorophyll analysis, water colour estimates, water temperature and secchi depth. It proved virtually impossible to collect oceanographic samples reliably while

the troller was underway and fishing, so we discontinued the more detailed oceanographic observations from trollers in 1982 and 1983. Fishermen were, however, still requested to record sky and sea conditions, water depth, and temperature.

As we noted above, we placed observers aboard some vessels in 1981. This was done in part to provide a baseline for information quality against which to compare that provided by fishermen themselves. It was clear from the results in 1981 that fishermen were just as conscientious, sometimes more conscientious, about recording observations as were observers. We, therefore, depended entirely on fishermen to provide information in 1982 and 1983. During these two years each fishermen signed a contract to provide certain kinds of information to us and was paid $20.00 per day for each day of information he provided. Unfortunately this still proved to be an insufficient incentive to ensure that all fishermen would properly examine their catch for potential tags.

In 1981 we had 35 vessels reporting, in 1982 we had 20 and in 1983 we had 26. Nine vessels provided information in all 3 years and 7 other vessels provided information in 2 years. The sample of vessels thus represented 1.5 - 2.5% of the coastal fleet of about 1200 trollers. During 1981 and 1982 the vessels reporting were mainly those that fished off the west coast of Vancouver Island, so that we obtained relatively little information from the central and northern parts of the coast. During 1983, however, we made a concerted effort to recruit vessels which fished on the north coast, so that information from 1983 is more representative of the central and north coasts. Although fewer vessels participated in 1982 and 1983 than in 1981, the number of fishing hours for which catch was reported was considerably greater in 1982 and 1983.

Fishermen who participated in the log book program remained enthusiastic about it throughout the project. We attribute this to several factors. All the fishermen were volunteers. We may, by employing only willing participants, have biased the information gathering in some unknown way. Nevertheless, considerable variation in fishing technique and capture success was evident among the fishermen who participated. We attempted to keep the information gathering process simple. This involved using check-off boxes in the log book as much as possible and it involved keeping the amount of information to be recorded as small as possible. Much of what we asked the fishermen to record routinely was information that they regularly jotted down in their personal logs. Exceptions were things like length measurements, sex, stomach contents and scale samples. Of these, only the collecting of scale samples provided the fishermen with any real difficulty. Finally, we made sure that the fishermen were provided with rapid feedback about the information that they were gathering, both during the fishing season to work out any data gathering problems and after the season was over to provide them with a summary of the information which they and others had gathered. We attempted to have these summaries prepared within a month or so of the end of the fishing season. During the first year we had designed the log books with carbon copies so that the fishermen could retain a copy of the information that he sent us. Fishermen were uninterested in these copies, however, preferring to maintain their own personal logs. During the first two years of the study we also arranged a meeting after the fishing season so that we could describe to the fishermen what we were learning from the data they provided.

These meetings also proved to be unsuccessful as it was generally inconvenient for the fishermen to travel to one location in order to attend the meeting. The most effective form of post-season feedback to the fishermen that we used was to mail them a simple summary of catch rates, release rates (of undersized or out of season fish), size, etc. of their catch and that of the fleet as a whole. Of particular importance was information on the origin of any tagged fish which they had landed.

In Table 1 are shown the regulations that affected the west coast troll fishery each year of the study. Some of the regulations were of a general nature whereas others were applied at specific places and times to achieve some desired management goal. Some aspects of the catch data can only be interpreted in the light of the regulations which were in effect at the time, so apparent anomalies in the catch data should first be checked against the regulations to determine if the anomaly arises from the regulations.

In addition to regulations governing times and areas where fishing was permitted, and species which could be retained, there were some general restrictions on gear. Trollers were permitted to fish with no more than six lines and could have no more than six gurdies. Prior to 1 July no barbed or trebble hook could be used unless it was mounted on a plug having minimum dimensions 12 mm x 150 mm. Size limits in effect during 1981-83 were 62 cm fork length (51 cm head off) for chinook and 48 cm fork length (40 cm head off) for other species. An exception to this was that from 1 July to the end of the season pink and sockeye could be retained as small as 30 cm fork length (26 cm head off).

In Table 2 are shown the catch data for chinook and coho. The hierarchy of the information in the table is: vessel > year > month > day > statistical area. Vessel names have been coded to preserve the annonymity of individual fishermen's data. The vessel numbering system used in this report will be repeated in all subsequent reports for cross referencing of catch. Missing data are indicated in the table by periods, zeros are real observations. In a few instances there are apparent errors in the data set. For example, hours fishing during the time period 10 am to 4 pm may be recorded as greater than 6. This usually happened when time fishing during the preceeding or following time periods was lumped into the midday time period. In addition, when the fisherman merely indicated the total hours fished during the day, and did not break it down by time period, we have shown the total hours in the midday time period. In a few instances it appears that catch data are incorrectly recorded in the "kept" column when they should have been in the "released" column and vice versa. We attempted to eliminate as many of these discrepancies as possible by careful checking of the data as it was collected. Those that could not be confirmed with the fishermen were left as originally recorded in the log books. In some instances, particularly with coho or pink salmon (pink salmon catches will be reported in a subsequent publication), rate of capture was sufficiently high that the fishermen did not have time to record catch accurately during each of the daily time periods. Under these circumstances the fishermen estimated the catch during each time period, and these estimates were the values entered in the log books.

ACKNOWLEDGEMENTS

Many people contributed to the success of this program. Chief among these were the fishermen who provided us with the data. Also involved in the program from time to time were Rus Schmidt, Bob Ball, Ted Carter, Louis Lapi, and various summer students.

Table 1. Regulations affecting the west coast troll fishery during 1981-1983.

1981:

1) The west coast was opened to trolling for salmon, except coho, on 15 April.

2) Area 21 closed to trolling from 15 April to 20 May and from 27 May to 1 July to reduce catch of sub-legal chinook and out of season coho. Parts of area 23 (south bank) were closed for the same reason on April 28 and during 13 June to 1 July.

3) Parts of area 12 closed to trolling, except during net fishery openings, form 15 April to 3 September. Retention of sockeye, pink and chum was permitted only during openings for net fishing. Area 11 was also closed to fishing for sockeye, pink and chum, except during net fishery openings, from 27 August to 30 September. Inside portions of area 3 were closed to trolling, except during net fishery openings, from 3 May to 6 September. The southern portion of area 2W was closed to trolling from 19 June to 1 July, and the western portion of area 1 was closed during 2-7 August.

4) Trolling for coho opened on 1 July.

5) During the month of July in areas 21 to 27 trollers were permitted to retain pinks up to a maximum of 33% (by number) of their combined chinook and coho catch.

1982:

1) The west coast, with the exception of areas 2E and 2W, was opened to trolling for salmon, except coho, on 15 April. Areas 2E and 2W were opened on 28 May.

2) Areas 1-11 were closed 10-24 June as a conservation measure for chinook.

3) From 23 June in area 3 and 29 June in other central and north coast areas, retention of sockeye, pink and chum was generally permitted only during net fishing times.

4) Areas 9-12 and 21-27 opened for coho fishing 28 June, areas 1-8 opened for coho fishing 1 July.

5) Area 12 was closed to trolling 24-25 August, reopened 26 August but sockeye, pink or chum could not be retained until after 3 September.

6) Areas 21, 11 and 30 were closed to trolling 6 August. Areas 11 and 30 were reopened 19 August. Area 21 remained closed until the end of the season.

7) Troll fishing closed on 24 September in area 9 and on 30 September in all other areas.

Table 1 (cont'd)

1983:

1) The west coast was opened to salmon trolling, except for coho, on 15 April.

2) Three trollers were chartered by the Department of Fisheries and Oceans to monitor the frequency of shakers in areas 21 and 23. Closures of these areas would not be implemented if trollers voluntarily avoided regions of high shaker catch identified by the charter vessels. This measure was successful in reducing undesirable capture of small and out of season salmon.

3) Areas 1-11 were closed to trolling during 17-30 June as a conservation measure for chinook.

4) Areas 21-27, 11 and 12 were closed to trolling for sockeye and pink salmon on 15 June. Areas 24-27, 11 and 12 were reopened for these species on 25 July. Retention of sockeye and pink salmon in most central and north coast areas was during net fishery openings only.

5) Trolling for coho opened on 1 July in all areas.

6) Areas 12 was opened for chum fishing on 3 July. During 15 June to 10 July trolling for sockeye and pink was not permitted in area 12. The area was closed to trolling for sockeye, pink and chum on 3 August and reopened on 26 August. Area 12 was closed to all trolling during 5-7 September but reopened for coho and chinook fishing on 8 September. During 13-30 September trollers were permitted to retain chum salmon only during net fishery openings.

7) Trolling in all areas was closed on 30 September.

INSTRUCTIONS

Vessel name, CFV No., and date are self-explanatory. Blocks of information to be recorded are shown under the headings: Before 10:00 a.m., 10:00 a.m. - 4:00 p.m., and after 4:00 p.m. Under each heading record:

1. Hours of fishing during the time period (length of time that fishing lines are in water).

2. Location: Loran bearing or map location and statistical area.

3. Water: average depth of water being fished and water temperature.

4. Weather: check off sky condition and wind strength. Note wind direction.

5. Catch data: Record the numbers of each species caught and retained; and caught (brought up to the boat) and released by the fisherman.

6. Comments: Storm bound, engine trouble, etc.

Fig. 1. Log book instructions for recording daily catch.

INSTRUCTIONS

record vessel name, CFV No., and date for each page of records. These records are for individual coho and chinook. Information to be noted for each fish is as follows:

1. Species (coho, chinook)
2. Flesh colour (chinook only: red or white flesh).
3. Fork Length, measured to the nearest cm from the tip of the snout to the fork of the tail (see diagram below).
4. Sex: male (M) or female (F).
5. Strap tag number. Many chinook and coho are tagged with a coded wire tag embedded in the cartilage of the nose. These fish also have the adipose fin removed (see diagram below). Any salmon with a missing adipose should be identified by having one of the strap tags provided attached to the head through the gill cover. Record the number on the strap tag in your records. These fish will later be collected by port samplers and their nose tags read. The strap tags will allow us to relate your data on location of capture, size, and sex to the tag data on age and river of origin.
6. Collect 5 scales from between the dorsal fin and lateral line of each fish and stick into scale book. Each scale book is made up of 5 cards each with space for scales from 10 fish. Record the card and fish number for each set of scales collected (see diagram below).
7. In the comments section record any other noteworthy information on fish.
8. If possible keep records for fish caught during the different time periods separate.
9. Use as many pages as necessary for each days catch but do not put catch from more than 1 day on the same page.
